Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 U.S.C. § 102

I. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

II. Claims 1-11 are rejected under 35 U.S.C. 102(b) as being by Staiger et al. Staiger et al discloses a light source 3 and optical reflector 1 adjacent to the light source for producing a beam which is generally spread widthwise with respect to the axis of the road, wherein the said optical reflector 1 has a continuous reflective surface that creates in said beam at least two distinct zones 8 of maximum light intensities, wherein said optical reflector has a central axis passing through the light source in the beam direction, and is asymmetrical along a plane on the central axis so said distinct zones have different angular offsets.

Claim Rejections - 35 U.S.C. § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Jiao et al discloses a light source 8 and optical reflector 20 adjacent to the light source for

producing a beam which is generally spread widthwise with respect to the axis of the road, wherein the said optical reflector 20 has a continuous reflective surface that creates in said beam at least two distinct zones (see figure 3) of maximum light intensities, wherein said optical reflector has a central axis passing through the light source in the beam direction, and is asymmetrical along a plane on the central axis so said distinct zones have different angular offsets.

Response to Arguments

1. Applicant's arguments filed on 07/25/03 have been fully considered but they are not persuasive. The applicant argues that Staiger fails to disclose two distinct zones of maximum light intensities. The examiner disagrees. As broadly claimed and supported by each segment of Staiger creates a distinct zone of maximum light intensity (see figure 6).

The applicant further argues that Jiao fails to teach a reflector having a continuous surface. The examiner disagrees. As broadly claimed, each segment of Jiao et al joins an adjacent segment so as to create a reflector having a continuous surface.

Conclusion

2. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
